Services & Service Times

Purpose: Allow the church admin to create services with their times and link each child's check-in and check-out to the correct service occurrence.

Dashboard addition: Add a Services tab within Kids Church, following the existing dashboard style. The tab opens a services list with an Add Service button and Edit actions.

Service form: Service name; schedule (weekly or specific date); day for weekly services or date for one-off services; start time; end time; active/inactive status. All names and times must be editable by the admin.

Examples: First Service - Sunday, 8:00-10:00 am; Second Service - Sunday, 10:30 am-12:30 pm; Friday Kids Fellowship - Friday, 5:00-6:30 pm.

Validation: Require a name, valid schedule and both times. End time must be later than start time for a same-day service. Store times in the church's configured timezone. Deactivating a service stops new check-ins but preserves attendance history.

Link services to check-in & check-out

Check-in selection: Add a Service dropdown and date selector above the children's list. Show service name and time together. Offer active services scheduled for the selected date; select automatically when only one is available. Otherwise require an explicit selection.

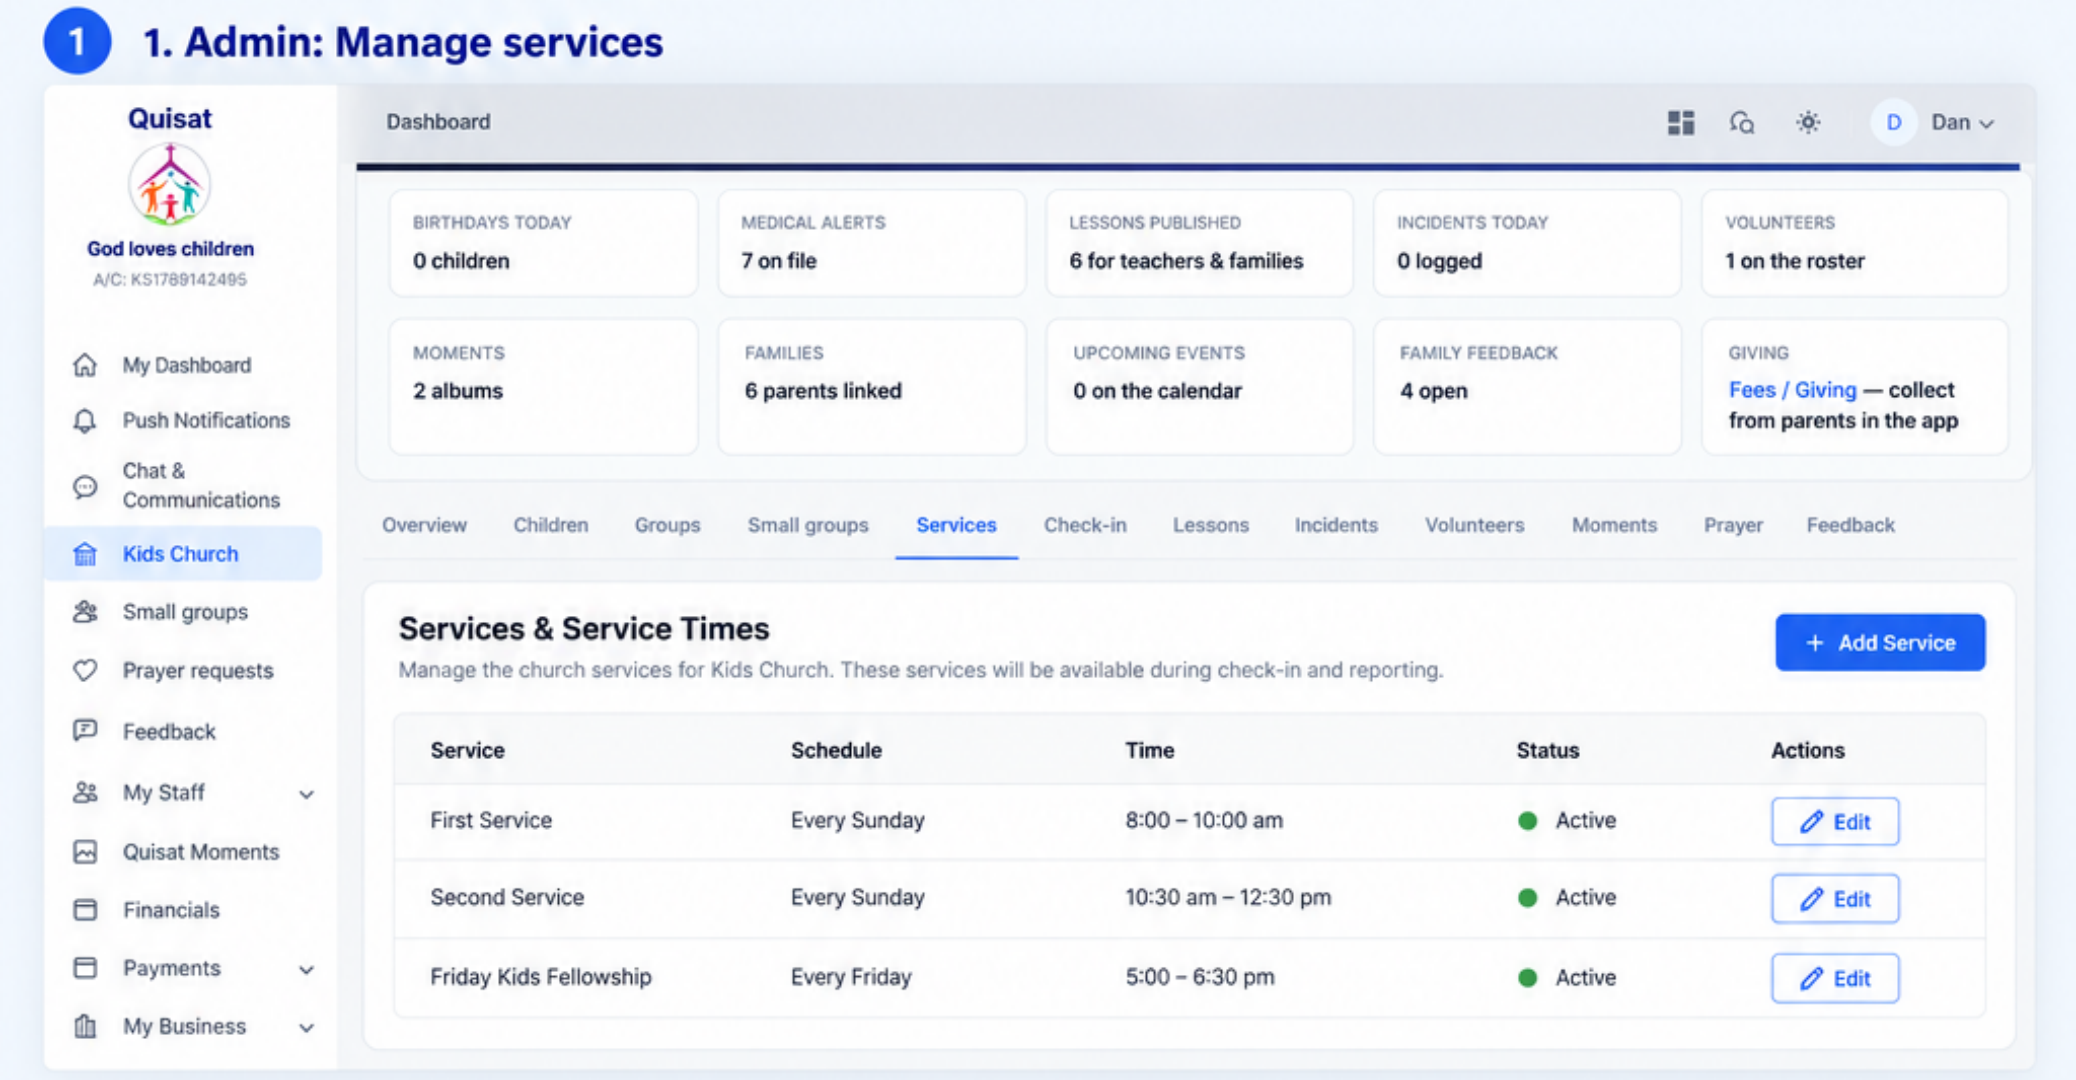

Attendance record: Save church, child, family, service ID, service date, check-in time, check-out time and status. Include visiting children and preserve the existing family check-in and pickup-code process. Prevent duplicate open attendance records for a child.

Check-out: Close the child's existing open attendance record for its original service, using the current pickup-code verification. A filter must never hide the only route to releasing a child who remains checked in from an earlier service. Do not automatically check children out when service time ends.

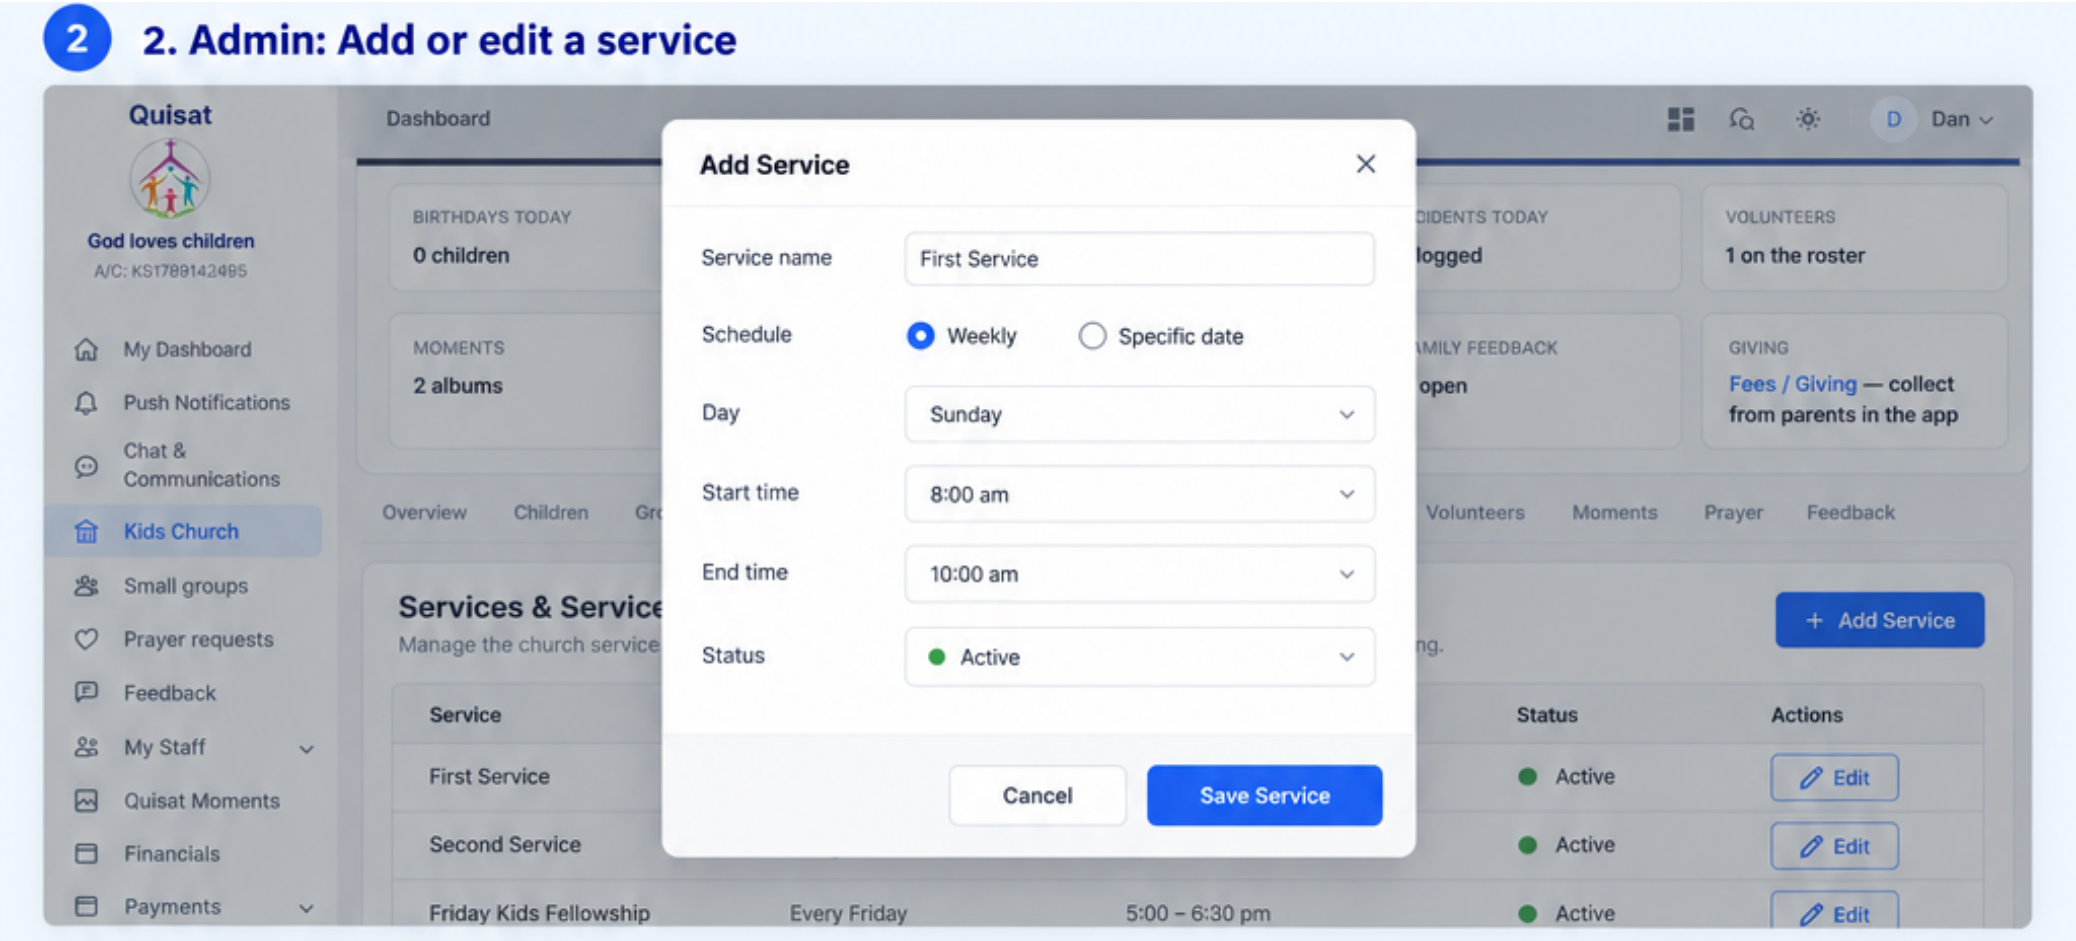

Another service: After check-out, create a separate attendance record if the child attends another service. Changing service settings must not relabel previous attendance; retain the service name and time applicable to that occurrence.

Reports and acceptance checks: Filter by service, date and class; show checked-in, checked-out and still-present totals. Verify two services on one date, weekly and one-off schedules, family and visitor check-in, duplicate prevention, pickup-code checkout and retained history after edits or deactivation.
