

Church Small Groups: Admin instructions

Developer instructions and mockups

Quisat | Church administration and parent app | 9 October 2026

Add Small Groups to the linked church module so administrators can create local groups, parents can enrol their children, and the church can track weekly meetings and attendance.

Church administration

- Create, edit and manage groups separately for each church. Allow church-specific terminology and customisation of form fields. Keep Small Groups distinct from existing church class/group management.

Group creation form

- Small group name
- Location
- Host name and host phone number
- Small group leader name and leader phone number
- Group capacity: maximum number of members

Show registered membership separately from capacity. Display available spaces as capacity minus registered members, and prevent enrolment beyond capacity.

Group list and weekly report

- List groups with their names, locations, member totals and capacity. Provide search and location filters, Edit and View members actions.
- Record each meeting with its group, meeting date and location.
- Show groups that met during the selected week, members who attended and attendance totals for each meeting.
- Provide week, group and meeting-date filters. Distinguish no meeting recorded from a meeting with no attendance recorded.
- Allow authorised administrators or assigned leaders to view, verify and correct attendance.

Parent app, attendance and access

Parent pages

- Find a group: list groups created by the linked church administrator. Search by group name and browse or filter by location. Show each location and available spaces clearly.
- Group details and enrolment: display location, host, leader, contact numbers and capacity. Allow parents to select and enrol only their own linked children.
- My groups: show which groups each child belongs to and provide access to those groups' meetings.
- Attendance: select a recorded meeting and the enrolled child or children who attended; submit attendance for that meeting.
- Attendance history: show only the parent's own children, meeting dates, attendance status and verification status.

Attendance rules

- Label parent submissions as pending verification until an authorised administrator or assigned leader verifies them.
- Prevent duplicate records for the same child and meeting. Corrections should update the existing record and retain who changed it and when.
- A meeting must exist before a parent submits attendance. Parents cannot create or edit church groups or meetings.

Permissions and packages

Keep records separate for each church. Parents manage only their linked children. Administrators and leaders manage groups according to their assigned permissions. Small Groups is an operational church feature available under Gold, Silver and Free.

Acceptance checks

Verify group creation and editing, customisable fields, search and location filtering, child enrolment and capacity enforcement, meeting selection, duplicate prevention, attendance verification, weekly reporting and church/parent access boundaries.

Mockup notes

The following mockups illustrate the administrator workspace and three separate parent pages. Names, contacts, groups and attendance counts are sample data. Written requirements take precedence over illustrative text. A My groups view is required even though the parent overview focuses on finding, enrolment and attendance.
